

# Claritas Calculated Hispanic Dataset

This dataset shows the different combinations of race available from the census survey for the entire population. The counts, calculated by Claritas, take the cross-tabulation of Non-Hispanic or Latino origin, and subtract it from the entire population to get the Hispanic cross-tabulation by race. A person could classify themselves into one of 63 different race categories based on their full or partial makeup from the 6 race categories - White, Black or African American, American Indian or Alaska Native, Asian, Native Hawaiian and Other Pacific Islander, and Other.
